

## What's New in EndNote

### Introducing EndNote X1

With EndNote® X1 you get everything you asked for and more. By listening to writers and researchers like you, and delivering ways to simplify your work, EndNote remains the favored, time-saving solution for organizing references and creating instant bibliographies.

#### **Create groups to view and manage subsets of references**

Drag and drop references into groups just as you do with playlists of music. Each EndNote X1 library can have up to 50 custom groups, and action-specific groups are created automatically for search results, file imports and reference transfers from EndNote Web, a companion product available via ISI Web of Knowledge.

#### **Cite While You Write(TM) in Microsoft® Word 2007 for Windows®**

EndNote X1 presents a new tab in Word 2007 for Windows to replace the Tools menu of previous versions. This new EndNote tab makes the most common Cite While You Write options easy to locate and select in one click.

#### **View and manage more reference details**

The library list display now reveals all authors so you can review more information instantly. The "Link to PDF" field is renamed to "File Attachment" for organizing up to 45 files per reference. Your custom reference types can now be exported and imported between computers easily. And, you can control the display font for the "Search" window and reference field labels.

#### **Other new features:**

Use the new Quick Search tool to search all fields in a library or group \* View file names with the icons in the File Attachment field \* Confirm changes to a reference with a new preference setting \* "Connect" is renamed to "Online Search" in the Tools menu \* "Show All" output style is renamed to "Show all fields" \* "Image" field is renamed to "Figure" for association with the Cite While You Write "Insert Figure" options \* Subject bibliographies can now include the Reference Type field  
\* Convert ProCite databases to EndNote libraries automatically

### **System Requirements EndNote X1 for Windows:**

- 0. Windows 2000\* (SP3), XP (SP2), Vista
- 0. Pentium 450 MHz or faster processor
- 0. 180 MB hard disk space available
- 0. 256 MB RAM
- 0. CD-ROM drive
- 0. Internet connection required to search Internet databases
- 0. EndNote X1 files are compatible across Windows and Mac OS X platforms
