Course Details

Skin Cancer Screening & Identification of Skin Lesions
This is a 40-hour online course offered by Flinders University in collaboration with the Lions Cancer Institute (Western Australia) and Lifestream Health Pty Ltd.

There are two options for this course:

1. For professionals who have never undertaken skin screening:
   a. Complete the online course.
   b. Attend a two-day workshop run in collaboration with Lions Cancer Institute (WA) - strongly advised (workshop details to be confirmed)

2. For professionals renewing their skills in skin screening:
   a. Complete the online course.
   b. The workshop is optional.

Materials and Cost:
Materials are available online after enrolment. Fees are $1,000 (inc GST) online only OR $2,200 (inc GST) online plus face-to-face workshop. Participants will be mailed a text book at the end of the course.

Registrations close Friday 12 October 2012.
If you do not receive written confirmation of your registration, please phone (08) 8201 3558.

Cancellation:
A full refund will only be made where written advice of cancellation is received not later than 5 working days prior to commencement of the course.

This course has been endorsed by the Royal College of Nursing, Australia, according to approved criteria (25 RCNA CNE points).
Aims and Objectives

Cancer has a significant impact on the health of Australians than any other disease group. The Australian Institute of Health and Welfare states that one in two Australians will develop cancer and one in five will die before 85 years of age as a result of it. The most commonly reported cancers in Australia are prostate cancer, bowel cancer, breast cancer and melanoma of the skin. These account for over half of the reportable cancers diagnosed in 2007 (AIHW 2010).

This course is designed for advanced clinical practice clinicians to develop skills in skin cancer screening who have either never undertaken this activity before, or who are looking to refresh their skills in the activity. The course provides information that will assist in developing skills that allow for identification of common skin lesions and suspicious lesions that can then be referred to specialist care for further clarification and treatment. It also supports the Australian Primary Health Care Strategy by providing opportunities for increasing skin cancer awareness, surveillance and health promotion.

Outcomes

By the end of this course you will be able to undertake a basic skin screening consultation.

This course will prepare you to:
1. Understand the impact that skin cancer has on the disease burden of Australia.
2. Conduct a skin screening clinic.
3. Undertake a basic skin assessment.
4. Identify suspicious skin lesions.
5. Refer suspicious lesions to appropriate medical specialists.
6. Be able to provide health education on the prevention of skin cancer.
7. Understand the professional responsibilities that accompany the process of skin screening surveillance.

PLEASE NOTE: This course follows the principle that population based skin screening identifies possible skin lesions for further examination; it does not diagnose skin lesions and as such it does not provide specialist training for skin lesion diagnostics.

Assessment

The course is conducted entirely online.

1. There is a pre-test that carries no overall course weighting. It serves to identify your individual learning needs. This is a multi-choice exercise and you will be provided with feedback immediately after you complete the test.
2. There are six modules with scenarios and tasks that require completion. There is a multi-choice test and you will receive the mark as soon as you complete the test. The test focuses on identification of various skin lesions and for this reason you will need to achieve a pass mark of 80%.

A certificate of completion will be provided once you have successfully completed the course.
