Flammable Solids

Flammable solids are hazardous because they...

- ignite easily
- burn vigorously

These include sulphur, red phosphorus, matches, etc.

Flammable solids may ignite...

- from friction or heat.
- on exposure to air.
- in the presence of water.
- spontaneously.

Always...

Read MSDS and warning label instructions when working with flammable solids.

Use and store flammable solids in temperature-controlled environments.

Keep containers closed.

Avoid heat, sparks and flames.

Prohibit smoking around flammable solids.
