Miscellaneous Hazardous Materials

Miscellaneous hazardous materials are materials that do not meet the definition of any other hazard class, but still present a hazard during transportation. This category includes:

- any material which has an anaesthetic, irritating, noxious or other similar property which could cause extreme discomfort or annoyance in the event of leakage,
  
  eg. chloroform

- hazardous substances and wastes as defined by the U.S. Environmental Protection Agency,
  
  eg. waste epoxy resins

- elevated temperature materials,
  
  eg. asphalt

- marine pollutants,
  
  eg. lead from gasoline

Remember:

- Handle all dangerous goods according to the directions on the material's MSDS or warning label.

- Properly identify and prepare all dangerous goods for safe shipment.
