

Does your organisation share
our passion for *innovation*?

PhD Student Industry Internship

Partner with us in the *fearless* pursuit of knowledge.

Engage with PhD Students for Industry Innovation

By working with PhD students on a flexible, short-term minimum 3 months full-time equivalent industry project, you will:

- Co-design a short-term research project that matters to your organisation
- Enjoy a cost-effective partnership
- Connect with university talent for quick insights & future opportunities
- Increase your staff's leadership & coaching skills
- Tap into the Flinders research community.

The internship can be undertaken on a full-time or part-time basis, and delivered face-to-face or remotely, or a combination of both with PhD students from within one of our six colleges:

- Business, Government & Law
- Education, Psychology & Social Work
- Humanities, Arts & Social Sciences
- Medicine & Public Health
- Nursing & Health Sciences
- Science & Engineering

There is no financial contribution required. However, you can offer a top-up stipend to attract talented students.

As an industry partner, you will be building the skills of the future research workforce including:

- Industry-focused professional skills
- Ability to communicate complex ideas and solutions to different audiences
- Be a part of the recent Commonwealth initiatives directed at supporting collaboration between industry and research.

Typically, Flinders University transfers the created Intellectual Property (IP) by a student during an internship to the internship organisation subject to agreed terms with Flinders University.
