

Foundation Studies

Option Topic: Foundations of Sciences, Technology and Health Sciences

Discover key biology, physics and chemistry concepts for your university pathway

The Foundations of Sciences, Technology and Health Sciences is an option topic available to students enrolled in any of the Foundation Studies courses at Flinders University.

The topic provides an introduction to some of the key concepts that underpin biology, chemistry and physics in preparation for university studies.

You'll gain an understanding of the scientific method and develop core skills across a range of different science disciplines.

Who is the topic for?

This topic is ideal if you are:

- Planning to study a STEMM degree such as science, information technology, engineering or health and medical sciences
- Looking to understand key biology, chemistry and physics topics
- Wanting to build confidence before starting uni

What will you develop?

- Confidence applying scientific inquiry skills
- Skills using scientific and research language
- Knowledge about evidence-based approaches used in biology, chemistry and physics
