

Study

Bachelor of Health Sciences

Gain an excellent grounding in all aspects of the health sector.

In your Health Sciences degree, you will develop the ability to critically approach new challenges in contemporary healthcare and be equipped to enter the workforce in a variety of health-related sectors.

Flexible future

This course has real flexibility to create your own future. You will have the ability to build your own health sciences degree by combining core skills topics with topics of interest from across the University, or you can choose from eight different specialisations.

Practical experience

This degree provides you with the option to undertake a work placement, preparing you for the workforce and giving you the opportunity to build industry connections and develop practical skills, ensuring you are graduate ready.

Variety of workplace settings

This degree will open the door to various workplace settings including corporate or government departments, not-for-profit organisations, or community health centres.

“This program offers a unique structure for students to build a great foundation in their studies for the more specialised degree. At the same time, the program also provides the students with the opportunity to explore and experience different health fields before making their decision on a program to specialise in.”

Kevin Chao, Bachelor of Health Sciences/Master of Physiotherapy
